

Module Objectives

- Understanding the value of adaptability → a skill for success in times of change
- Drivers of adaptability & resilience.

Ability to adapt → ultimate superpower

'Being ready for future' →
→ Reacting to next challenge that comes our way ✗
→ Prepared to meet it when it arrives ✓

Definitions

1. > Adaptability :- Ability to change or adjust based on the situation.
2. > Resilience :- ability to stand strong in difficult times and face the situation.
3. > psychological :- relating to mind and emotions.

Adaptability & Resilience → trait ✗
└→ skill or state ✓
that can be built through practice

Drivers of Adaptability

1.) Activate Learning { I do it }

↳ set clear intentions on what you want to learn & to develop +ive habits

to avoid change & uncertainty in challenging time

2.) Develop awareness of your mindsets (Very important) { Sometimes }

3.) Reinforce the purpose { Often I do it }

↳ link your actions to personal goals

Clarity of personal meaning helps cut the noise of the world and

channel your energy towards what matters most to you → keeping you going through when it gets challenging.

Situation I could have been more adaptable & resilient:-

During Technoxian 2025, my team lost in the maze solver challenge even after giving 6 months effort. There were mistakes done in the preparation phase I agree, a lot though from my side. However, I was so shattered and low in confidence after the challenge that I lost my cool, and was hospitalized for 1 week, that hampered my academics; even I had time to study but I didn't study for demotivation, and situation was such I had made my mind to leave the club; free from all responsibilities. I was resilient on the part that I continued as the representative of robotics club but had I have

Q:- New things I am excited to do?

Ans

- 1.) PCB designing from Altium Course
- 2.) Verilog learn completely + projects on it
- 3.) Make a 4 bit calculator from scratch
- 4.) Learn Embedded C & IoT development from AWS course
- 5.) Make a quadraWeb bot
- 6.) Complete my NPTEL course on Embedded System design
- 7.) Learn Computer Architecture
- 8.) Learn to do flips & long jump properly.
- 9.) Understand the Architecture of MSP-430 chip.
- 10.) Learn AI + Machine Learning
- 11.) Do DSA
- 12.) Become the GS BOST of college in 3rd year.
- 13.) Become college president in 4th year.

Framing Intentions

1.) Focus on Journey

→ prioritize learning experience over any specific performance goal you want from that journey.

Eg:- At the end of it; if nothing; I learnt something new, I can do this or that.

- ✓ I want to do forward program to build future ready skills
- ✗ I want to do forward program to get certificate.

2.) Link to meaning

→ the only purpose is you.
→ it helps continue even when things get tough.

Performance Goals

V.S.

Learning Intentions

target to achieve when you have acquired the skills or knowledge to grab that.

Not focus on specific target to achieve but on the process of learning or discovering new ways to tackle/adapt to any challenge that arise mid-way.

★ ★ ★
★ Q:- ★ What you think your professional and personal life look like in coming years?

→ Good learning intentions prioritize the **experience itself**; not the **outcome**. Instead of target focus on:-

1. > Process

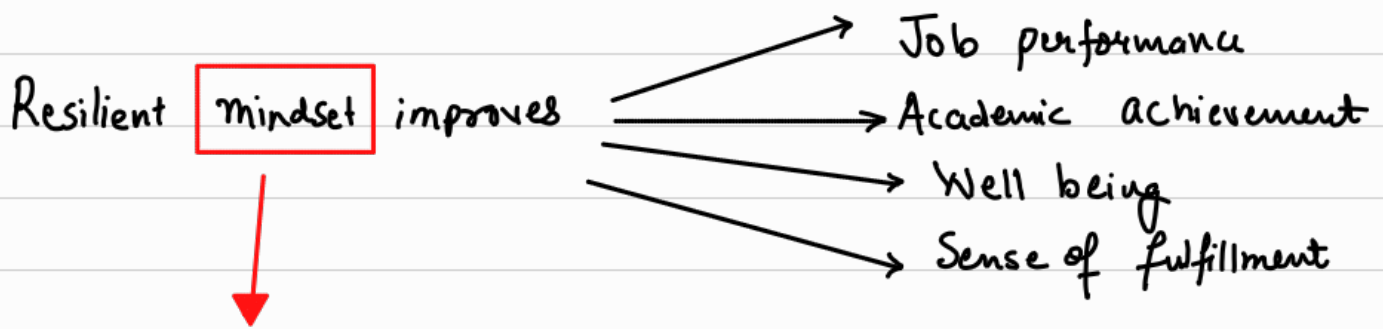

2. > Discovering & exploring new ideas

3. > Overall growth → **Only purpose in life is to better yourself.**

→ It is important to have pride in yourself for the stuff you are good at my brother. ←

Mindsets → powerful tool that you can utilize to help improve your performance in activities or tasks.

→ "belief filters" blur you & reality

→ it influence how you perceive, feel or behave in this world.

→ it drives our behaviour

→ it can empower you or hold you back in any situation

No mindset is good or bad, it must be adopted based on situation and that is what we call resilience and adaptability

Fixed

"A challenge is a test that I pass or fail, based on my inherent abilities. If I am not already good at something, I will not do well."

vs.

Growth

"I can learn to do anything I want. Challenges and mistakes are opportunities for learning and development."

Expert

"I should already know the answer. I should perform during a challenge by having the answers."

vs.

Curious

"I am going to ask a lot of questions, explore, and discover. I can learn a lot from trying something new."

Reactive

"I need to identify the problem and what is causing it so I can apply tested, well-practiced solutions to bring the situation under control."

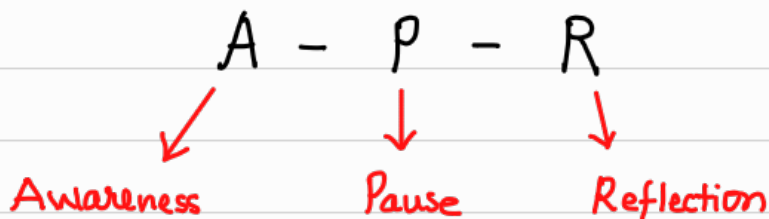

vs.

Creative

"I need to lead with purpose. I will empower myself and others to explore new possibilities and experiment our way to an innovative solution."

Victim	vs.	Agent
"There are many factors beyond my control that affect my ability to thrive, grow, and get things done."		"Within reason, I believe in my ability to learn new things, overcome challenges, and accomplish just about anything I put my mind to."
Scarcity	vs.	Abundance
"A challenge typically involves limited resources, hard choices, and trade-offs that must be made."		"A challenge is typically a potential win-win situation looking to be discovered."
Certainty	vs.	Exploration
"I would rather things go according to plan than take a detour that may end up better."		"I do not know what the future holds, so the best way to succeed is to plan ahead but be flexible and curious as I go."
Protection	vs.	Opportunity
"I need to prevent something bad from happening."		"I could make something great happen."

APR Technique

LEARNING HABITS # "makes our behaviour automatic"

↓

So far I have developed many good & bad habits

↓

consciously or subconsciously

Success → quickly respond to challenges, acquire new skills & adapt.

Minimising time to get up after fall & show up everyday even if it is ~1% ↓
Matters

Learning Habits I have :-

- 1.) I do critical thinking before accepting what it is being said to me.
- 2.) I prefer concept clarity over cramming stuff.
- 3.) I am inherently motivated to share my knowledge to others, having a mindset that it will sharing knowledge improves mine.
- 4.) However, I am bad at asking help or guidance from anyone, even from those who are closest to me. { It is very important to put forward your intentions clearly without hesitation, becoz that is imp. for you, if something it's okay analyse & avoid in future, focus on what can be done now. → Beekh maangni; padhti hai }
- 5.) I tend to procrastinate stuff → especially my lab reports.
- 6.) I sometimes hesitate to ask questions in large gathering scenes.
- 7.) I sometimes speak low in voice & tone that creates hindrance in the actual message that needs to be passed. { From now-on-wards do everything with clean conviction }

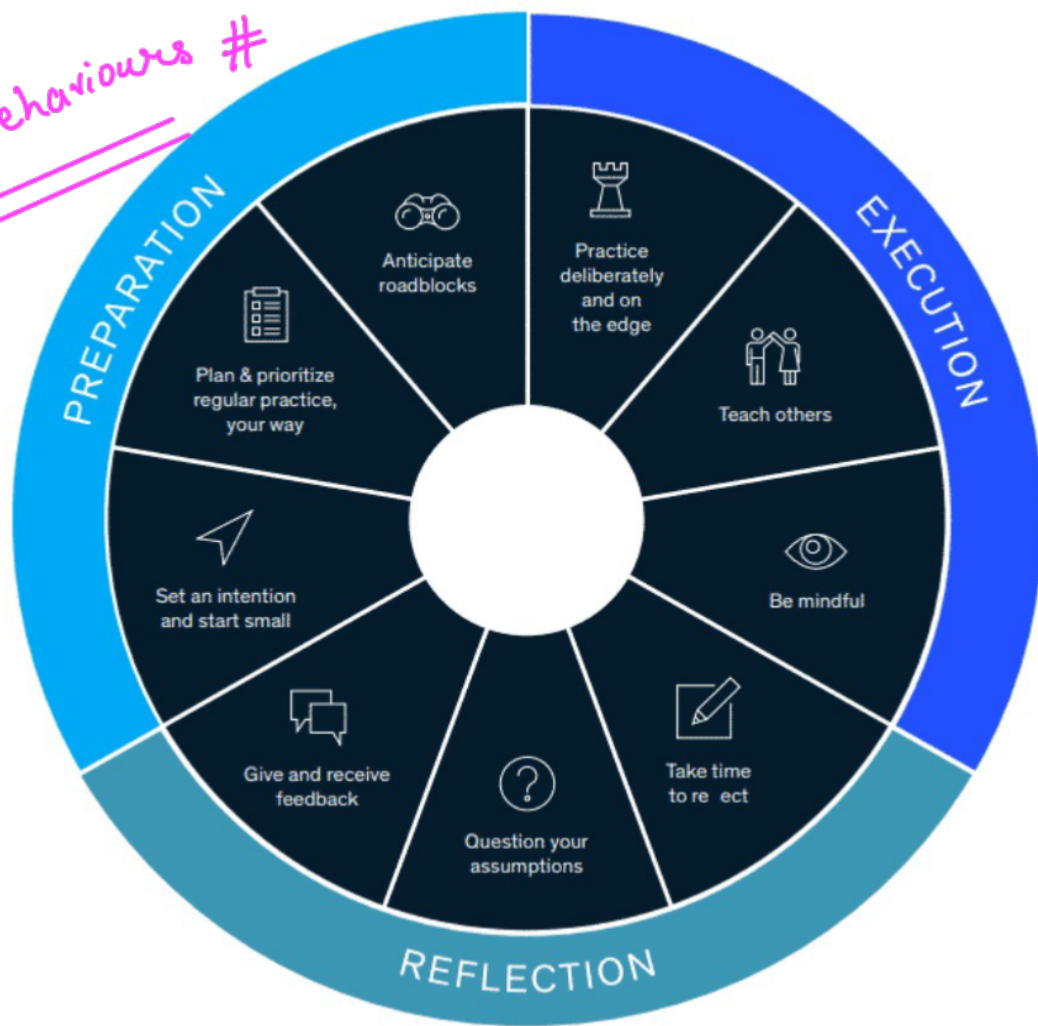

→ working for me

→ working against me

Key Points

- Research shows that cramming does not lead to true mastery. To actually learn something we need time, repetition & practice → "Long term success"
- It is crucial to have pride in yourself for good stuff in you; sense of ownership is important but alongside it is important to challenge yourself & let others also challenge it, whenever needed → ★ leave it your intelligence & listen it ★

Positive Learning Behaviours

Automating Your LEARNING BEHAVIOURS

Learning good habits + UNLEARN BAD ONES

★ 1. Time ★
{ 1-2 Months }

★ 2. Habit Loop ★

→ Cue { Reminders }

→ Routine { How it looks ^{when} in action? }

→ Reward { After adoption, reward yourself }
